Auditoría de Seguridad Información

Reporte de Reconocimiento

Descripción breve

El reporte de escaneo de vulnerabilidades detalla el resultado del análisis de los activos encontrados en el reporte de reconocimiento.

Jesús R. González / Juan Arturo Nolazco

Versión	Fecha	Descripción
1	18 – Mayo – 2017	Documento de escaneo y análisis de vulnerabilidades correspondiente a la infraestructura del conteo rápido del IEC Documento de escaneo y análisis

Dictamen elaborado por MsC. Jesús Raúl González Hernández en coordinación con Dr. Juan Arturo Nolazco.

1 Resumen Ejecutivo

Este documento presenta el resultado del análisis de vulnerabilidades que se realizo sobre los activos del Instituto Electoral de Coahuila así como los mecanismos y herramientas utilizadas para tal propósito.

El análisis presenta las vulnerabilidades con su clasificación basada en la base de datos de vulnerabilidades NVD con su impacto potencial así como la facilidad de explotación.

Este documento no presenta recomendaciones al respecto, solamente lo encontrado y documentado respecto a las clasificaciones de la NVD.

1.1 Alcances

El análisis solicitado por parte del IEC fue sobre activos de información primordiales para la operación del conteo rápido (PREP) el día de la elección estatal. Estos activos son:

- Infraestructura (Redes y servidores)
- Aplicaciones WEB (5 desarrollos)
- Problemas de configuración en infraestructura y servicios (Web servers, DB Servers)

2 Proceso de escaneo

Para facilitar esta sección se estructura en los descubrimientos externos en la red pública de Internet así como los internos, que son en donde se encuentran os desarrollos en cuestión.

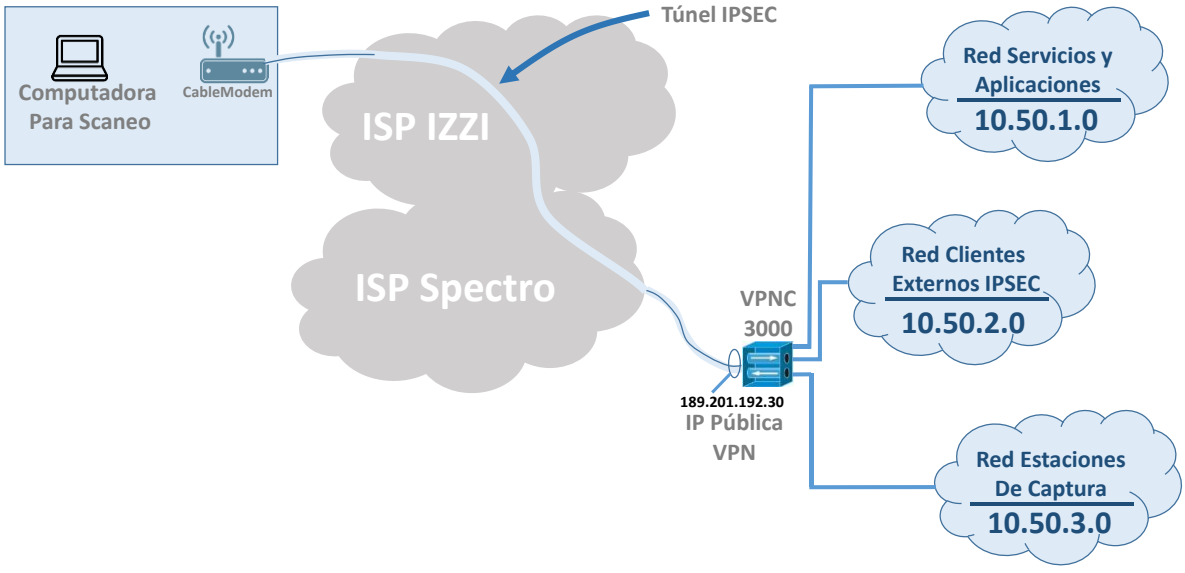

Ilustración 1 Ambiente para descubrimiento de vulnerabilidades

Hoy en día existe SPECTRO como proveedor de servicios, pero previo a las elecciones, habrá un proveedor adicional que aun no entra en producción. Todas las sesiones y pruebas de descubrimiento se hicieron mediante un túnel de IPSEC. Se determino utilizar la red de IZZI ya que de las que se tenía disponible era la que tenía mejor conteo de sitios para alcanzarla.

3 Identificación de vulnerabilidades en los sistemas

Las vulnerabilidades se revisaron contra la base de datos abierta de vulnerabilidades (OSVDB) sobre la cual se encontraron los siguientes activos con las siguientes vulnerabilidades durante los escaneos que se dieron sobre la infraestructura.

10.50.1.100		
ID OSVDB	**ID CVE**	**Descripción**
OSVDB:576	CVE-2015-1476	Requerir un drectorio con %00/, %2e/, %2f/ or %5c/ al final causa que el servidor muestre contenidos del directorio.
OSVDB:119	CVE-1999-0269	remote server may allow directory listings through Web Publisher by forcing the server to show all files via 'open directory browsing'. Web Publisher should be disabled
OSVDB:3092		**/webdav/index.html: WebDAV support is enabled.**
OSVDB:3288		directory listing when /'s are requested

10.50.1.103		
ID		**Descripción**
OSVDB-3092		**/webdav/index.html: WebDAV support is enabled.**

10.50.1.106		
ID		**Descripción**
OSVDB-3233		/jsp-examples/: Apache Java Server Pages documentation

10.50.1.109		
ID		**Descripción**
OSVDB-35878		PHP-Nuke module allows user names and passwords to be viewed
OSVDB-3092		**/webdav/index.html: WebDAV support is enabled.**

10.50.1.111		
ID	**Descripción**	**Descripción**
OSVDB-3268		Directory indexing is enabled
OSVDB-576	CVE-2015-1476	Requerir un drectorio con %00/, %2e/, %2f/ or %5c/ al final causa que el servidor muestre contenidos del directorio.
OSVDB-119	CVE-1999-0269	Remote server may allow directory listings through Web Publisher by forcing the server to show all files via 'open directory browsing'. Web Publisher should be disabled
OSVDB-3288		Abyss 1.03 reveals directory listing when /'s are requested
OSVDB-3233		Apache default file found

Las aplicaciones escaneadas se encuentran sobre la red 10.50.1.0. Para las redes 10.50.2.0 y 10.50.3.0 no encontraron activos que escanear ya que estaban bloqueados o bien apagados. De acuerdo a las entrevistas estas redes están en proceso de configurar los elementos para ser instalados ahí, por lo que al momento del reconocimiento no se encontró nada que verificar.

IP	Puerto	Aplicación	CVE Id	Nivel de Severidad (1-10)

			CVE-2016-1546	Medio (5.9)
10.50.1.107	-	Detectado pero no reporto puertos	-	-
10.50.1.108	TCP/8086	InfluxDB http admin 1.2.2	-	-
10.50.1.109	TCP/3000	Grafana	-	-
10.50.1.110		Detectado pero no reporto puertos	-	-
10.50.1.111	TCP/80	Apache httpd 2.4.18	CVE-2016-4979	Alto (7.5)
			CVE-2016-1546	Medio (5.9)

No hay evidencia que estas vulnerabilidades estén presente en los sistemas. El listado se tomo de las versiones de software instaladas y comparada con la lista de National Vulnerability Database (NVD - https://nvd.nist.gov/vuln/search)

Revisando las aplicaciones y versiones que se tienen instaladas, se detallan estas vulnerabilidades (solo están documentadas las que están por encima de la calificación 5.0).

Tabla de Vulnerabilidades y descripción		
Id Vulnerabilidad	**Descripción**	**Fecha de Alta**
CVE-2016-4979	The Apache HTTP Server 2.4.18 through 2.4.20, when mod_http2 and mod_ssl are enabled, does not properly recognize the "SSLVerifyClient require" directive for HTTP/2 request authorization, which allows remote attackers to bypass intended access restrictions by leveraging the ability to send multiple requests over a single connection and aborting a renegotiation	06/Jul/2016
CVE-2016-4375	Multiple unspecified vulnerabilities in HPE Integrated Lights-Out 3 (aka iLO 3) firmware before 1.88, Integrated Lights-Out 4 (aka iLO 4) firmware before 2.44, and Integrated Lights-Out 4 (aka iLO 4) mRCA firmware before 2.32 allow remote attackers to obtain sensitive information, modify data, or cause a denial of service via unknown vectors	08/Sep/2016
CVE-2015-5435	Unspecified vulnerability in HP Integrated Lights-Out (iLO) firmware 3 before 1.85 and 4 before 2.22 allows remote authenticated users to cause a denial of service via unknown vectors.	29/sep/2015
CVE-2015-8325	The do_setup_env function in session.c in sshd in OpenSSH through 7.2p2, when the UseLogin feature is enabled and PAM is configured to read .pam_environment files in user home directories, allows local users to gain privileges by triggering a crafted environment for the /bin/login program, as demonstrated by an LD_PRELOAD environment variable.	30/Abr/2016
CVE-2016-3115	Multiple CRLF injection vulnerabilities in session.c in sshd in OpenSSH before 7.2p2 allow remote authenticated users to bypass intended shell-command restrictions via crafted X11 forwarding data, related to the (1) do_authenticated1 and (2) session_x11_req functions.	22/Mar/2016
CVE-2016-1546	The Apache HTTP Server 2.4.17 and 2.4.18, when mod_http2 is enabled, does not limit the number of simultaneous stream workers for a single HTTP/2 connection, which allows remote attackers to cause a denial of service (stream-processing outage) via modified flow-control windows.	06/Jul/2016
CVE-2012-1180	Use-after-free vulnerability in nginx before 1.0.14 and 1.1.x before 1.1.17 allows remote HTTP servers to obtain sensitive information from process memory via a crafted backend response, in conjunction with a client request.	17/Abr/2015
CVE-2017-3600	Vulnerability in the MySQL Server component of Oracle MySQL (subcomponent: Client mysqldump). Supported versions that are affected are 5.5.54 and earlier, 5.6.35 and earlier and 5.7.17 and earlier. Difficult to exploit vulnerability allows high privileged attacker with network access via multiple protocols to compromise MySQL Server. Successful attacks of this vulnerability can result in takeover of MySQL Server. Note: CVE-2017-3600 is equivalent to CVE-2016-5483. CVSS 3.0 Base Score 6.6 (Confidentiality, Integrity and Availability impacts). CVSS Vector: (CVSS:3.0/AV:N/AC:H/PR:H/UI:N/S:U/C:H/I:H/A:H).	24/Abr/2017
CVE-2017-3599	Vulnerability in the MySQL Server component of Oracle MySQL (subcomponent: Server: Pluggable Auth). Supported versions that are affected are 5.6.35 and earlier and 5.7.17 and earlier. Easily "exploitable" vulnerability allows unauthenticated attacker with network access via multiple protocols to compromise MySQL Server. Successful attacks of this vulnerability can result in unauthorized ability to cause a hang or frequently repeatable crash (complete DOS) of MySQL Server. CVSS 3.0 Base Score 7.5 (Availability impacts). CVSS Vector: (CVSS:3.0/AV:N/AC:L/PR:N/UI:N/S:U/C:N/I:N/A:H). NOTE: the previous information is from the April 2017 CPU. Oracle has not commented on third-party claims that this issue is an integer overflow in sql/auth/sql_authentication.cc which allows remote attackers to cause a denial of service via a crafted authentication packet	24/Abr/2017
CVE-2017-3455	Vulnerability in the MySQL Server component of Oracle MySQL (subcomponent: Server: Security: Privileges). Supported versions that are affected are 5.7.17 and earlier. Easily "exploitable" vulnerability allows low privileged attacker with network access via multiple protocols to compromise MySQL Server. Successful attacks of this vulnerability can result in unauthorized update, insert or delete access to some of MySQL Server accessible data as well as unauthorized read access to a subset of MySQL Server accessible data. CVSS 3.0 Base Score 5.4 (Confidentiality and Integrity impacts). CVSS Vector: (CVSS:3.0/AV:N/AC:L/PR:L/UI:N/S:U/C:L/I:L/A:N).	24/Abr/2017
CVE-2017-3454	Vulnerability in the MySQL Server component of Oracle MySQL (subcomponent: Server: InnoDB). Supported versions that are affected are 5.7.17 and earlier. Easily "exploitable" vulnerability allows high privileged attacker with network access via multiple protocols to compromise MySQL Server. Successful attacks of this vulnerability can result in unauthorized ability to cause a hang or frequently repeatable crash (complete DOS) of MySQL Server as well as unauthorized update, insert or delete access to some of MySQL Server accessible data. CVSS 3.0 Base Score 5.5 (Integrity and Availability impacts). CVSS Vector: (CVSS:3.0/AV:N/AC:L/PR:H/UI:N/S:U/C:N/I:L/A:H).Abr/24/201	24/Abr/2017
CVE-2017-3453	Vulnerability in the MySQL Server component of Oracle MySQL (subcomponent: Server: Optimizer). Supported versions that are affected are 5.5.54 and earlier, 5.6.35 and earlier and 5.7.17 and earlier. Easily "exploitable" vulnerability allows low privileged attacker with network access via multiple protocols to compromise MySQL Server. Successful attacks of this vulnerability can result in unauthorized ability to cause a hang or frequently repeatable crash (complete DOS) of MySQL Server. CVSS 3.0 Base Score 6.5 (Availability impacts). CVSS Vector: (CVSS:3.0/AV:N/AC:L/PR:L/UI:N/S:U/C:N/I:N/A:H).	24/Abr/2017

Tabla de Vulnerabilidades y descripción		
Id Vulnerabilidad	**Descripción**	**Fecha de Alta**
CVE-2017-3450	Vulnerability in the MySQL Server component of Oracle MySQL (subcomponent: Server: Memcached). Supported versions that are affected are 5.6.35 and earlier and 5.7.17 and earlier. Easily "exploitable" vulnerability allows unauthenticated attacker with network access via multiple protocols to compromise MySQL Server. Successful attacks of this vulnerability can result in unauthorized ability to cause a hang or frequently repeatable crash (complete DOS) of MySQL Server. CVSS 3.0 Base Score 7.5 (Availability impacts). CVSS Vector: (CVSS:3.0/AV:N/AC:L/PR:N/UI:N/S:U/C:N/I:N/A:H)	24/Abr/2017
CVE-2017-3331	Vulnerability in the MySQL Server component of Oracle MySQL (subcomponent: Server: InnoDB). Supported versions that are affected are 5.7.17 and earlier. Easily "exploitable" vulnerability allows high privileged attacker with network access via multiple protocols to compromise MySQL Server. Successful attacks of this vulnerability can result in unauthorized ability to cause a hang or frequently repeatable crash (complete DOS) of MySQL Server as well as unauthorized update, insert or delete access to some of MySQL Server accessible data. CVSS 3.0 Base Score 5.5 (Integrity and Availability impacts). CVSS Vector: (CVSS:3.0/AV:N/AC:L/PR:H/UI:N/S:U/C:N/I:L/A:H).	24/Abr/2017
CVE-2017-3329	Vulnerability in the MySQL Server component of Oracle MySQL (subcomponent: Server: Thread Pooling). Supported versions that are affected are 5.5.54 and earlier, 5.6.35 and earlier and 5.7.17 and earlier. Easily "exploitable" vulnerability allows unauthenticated attacker with network access via multiple protocols to compromise MySQL Server. Successful attacks of this vulnerability can result in unauthorized ability to cause a hang or frequently repeatable crash (complete DOS) of MySQL Server. CVSS 3.0 Base Score 7.5 (Availability impacts). CVSS Vector: (CVSS:3.0/AV:N/AC:L/PR:N/UI:N/S:U/C:N/I:N/A:H).	24/Abr/2017
CVE-2017-3309	Vulnerability in the MySQL Server component of Oracle MySQL (subcomponent: Server: Optimizer). Supported versions that are affected are 5.5.54 and earlier, 5.6.35 and earlier and 5.7.17 and earlier. Easily "exploitable" vulnerability allows low privileged attacker with network access via multiple protocols to compromise MySQL Server. While the vulnerability is in MySQL Server, attacks may significantly impact additional products. Successful attacks of this vulnerability can result in unauthorized ability to cause a hang or frequently repeatable crash (complete DOS) of MySQL Server. CVSS 3.0 Base Score 7.7 (Availability impacts). CVSS Vector: (CVSS:3.0/AV:N/AC:L/PR:L/UI:N/S:C/C:N/I:N/A:H).	24/Abr/2017
CVE-2017-3308	Vulnerability in the MySQL Server component of Oracle MySQL (subcomponent: Server: DML). Supported versions that are affected are 5.5.54 and earlier, 5.6.35 and earlier and 5.7.17 and earlier. Easily "exploitable" vulnerability allows low privileged attacker with network access via multiple protocols to compromise MySQL Server. While the vulnerability is in MySQL Server, attacks may significantly impact additional products. Successful attacks of this vulnerability can result in unauthorized ability to cause a hang or frequently repeatable crash (complete DOS) of MySQL Server. CVSS 3.0 Base Score 7.7 (Availability impacts). CVSS Vector: (CVSS:3.0/AV:N/AC:L/PR:L/UI:N/S:C/C:N/I:N/A:H).	24/Abr/2017

Estas vulnerabilidades son asociadas a la versión de la aplicación o sistema operativo que se tienen identificadas, pero en el escaneo no se encontró evidencia que estuvieran presentes en los sistemas, puede haber varias razones:

- Los sistemas estan correctamente parchados pero se encuentran en la misma versión
- El sistema por alguna razón que nos esta bloqueando no permite cuestionar a la aplicación sobre su estado o situación mas alla del nombre, versión y pocos datos adicionales que nos ofrece la tarea de escaneo que hicimos.

Las vulnarabilidades que no se les encontró evidencia, no se les practico análisis de riesgo ya que no se tiene evidencia que existan en los sistemas y tampoco contra que evaluarlo en dado caso. Las medidas a tomar contra estas serían recomendaciones.

4 Vulnerabilidades en el Proceso

En base a los procesos descritos por el personal del IEC, se pudo constatar las siguientes situaciones de vulnerabilidad.

Vulnerabilidad Captura	Descripción
No hay registro de personal de captura en el centro	No hay registro de visitantes y/o personas que están laborando en el centro de acopio central
No se valida la entrada de personal	No se valida la entrada de personal a la entrada del centro de captura
No ha hay manuales que describan los procesos en sitio de operación	No se tienen manuales de procesos en los sitios de operación
Solo hay una persona que lo sabe operar	Solo hay una persona que sabe operar los equipos en sitio
No tener registro de pertenencias	No hay revisión de lo que cada persona trae a las instalaciones
No tener punto de control de entrada en el sitio de captura	No hay un punto de control para registrar pertenencias al entrar al centro de captura
No ha hay manuales que describan los procesos en sitio de operación	No hay manuales para describir procesos en sitios de operación
Falla en los proveedores de Internet para conectar al sitio central	Caídad de enlace de alguno de los proveedores de Internet
Smartphone de captura controlado	Responsable y dueño del Smartphone para captura
Aplicación de captura teléfono	Control de lo que se puede instalar al telefono
Aplicación de captura en host sitio central	No haya validación de dígitos al momento de entrar la captura en el campo de captura
No hay login en las terminales	No se requiere un usuario/clave para entrar en la aplicación de captura en el sitio central de acopio del IEC.

Vulnerabilidad Operación	Descripción
Sin respuesta por parte del equipo de soporte en el centro de datos	No se tiene respuesta del equipo de soporte por parte del centro de datos como plan de respuesta a incidentes
Falla de servicio en la nube	Servicio del proveedor de la nube valla
Enlaces de sitios de centros de acopio remotos.	Enlaces de los sitios remotos de captura reportan incidente de conectividad
Enlace de comunicación del centro acopio central	Enlaces del centro de acopio central reportan incomunicación
Por alguna razón los sistemas de captura fallan	Los sistemas usados en la captura fallan
Caída eléctrica	Falla en los sistemas eléctricos que alimentan a las estaciones de captura centrales
Falla HW	Los servidores tienen falla (en cualquiera de los componentes)
Falla de Disco	El disco de almacenamiento falla o se llena con imágenes.
Plan de contingencia	Se tiene definido, pero aun no se tiene el proveedor para ejecutar dicho plan
Matriz de responsables x aplicación	Localizar a los ingenieros asignados para las aplicaciones
Monitoreo de la infraestructura	Que haya un proceso regular de monitoreo de infraestructura
